

**COMPLEMENTARY ITEMS
PINS - TONGUES AND KEYS
OTHER RELATED TURNED / GROUND ARTICLES**

To complete our range, with the collaboration of production units, some of which are small, others artisanal, but all highly specialised, we can produce small and very small series of 'complementary' components, such as pins, tongues and keys, and custom-designed articles for the most diverse needs.

We can cover the entire range of standard technical articles for the trade, but where the types available on the market are unable to meet the stringent requirements of these sensitive sectors, especially in terms of materials or non-standard dimensions, we produce the most different articles on request.

Among the main ones of this type, we can highlight:

- **CYLINDRICAL PINS** (tol. h8 / h11 / m6): metric or inch dimensions, possibly bore taper
- **CONICAL PLUGS**: metric and inch dimensions, possibly with extraction hole and with different degrees of conicity
- **DETACHABLE PLUGS**: inch sizes and special materials
- **DRAFT PINS**: execution with circlip grooves, inclinations, different diameters, etc.
- **WRENCHES AND WRENCHES**: non-standard dimensions or special materials, with holes, etc.
- **PINS, BOCKETS, SPACERS, etc.**
- **RECOVERY OPERATIONS ON STANDARD ARTICLES**: e.g. head drilling, execution of cylindrical/conical shank ends, etc.

Where consumptions are higher, we produce large batches, even of fairly complex parts, for one-off or scheduled deliveries.

With the 'stock management' service, we prepare authorised economical lots, to be delivered according to customer needs, guaranteeing them economies of scale, thanks to a single set-up, with collection, according to agreement, within an agreed period.
